To the Members of the Admission Committee,

It is a pleasure to recommend Mr. Sana Ullah for admission to your PhD program. As an Associate Professor at the Institute of Biotechnology and Genetic Engineering, The University of Agriculture, Peshawar, I interact with many students specializing in Biotechnology and Computational Biology. While many are capable, only a few demonstrate the true academic excellence and research potential required for doctoral studies. Mr. Sana Ullah is undoubtedly among that top 10%.

I came to know Mr. Sana Ullah around 6 years ago when he was studying in his bachelor at IBGE, the University of Agriculture Peshawar, Pakistan. He has studied a wide range of subjects in his BS and MPhil Degrees related to different fields of biological sciences including Biotechnology, Biochemistry, Molecular Biology, Genetics and Recombinant DNA Technology. He possesses a rare ability to synthesize complex information and generate original ideas in real-time.

Mr. Sana Ullah's innovative research on “Artificial Intelligence-Assisted Real-Time Detection of Devastating Fruit Fly Species for Their Population Monitoring and Effective Control” stands out as a remarkable contribution, showcasing his exceptional creativity and forward-thinking approach in developing practical AI-driven solutions for agricultural pest management.

Mr. Sana Ullah is a student of high caliber who combines theoretical knowledge with practical research proficiency. I have full confidence that his talents will flourish within your program and that he will make meaningful contributions to your laboratory's research goals. I recommend him for your PhD position without reservation.

Sincerely,

Israr Ud Din, PhD
