THE UNIVERSITY OF AGRICULTURE PESHAWAR

Ph. No. +92-91- 9221304 (3234)

Dr. Muhammad Sayyar Khan (Ph.D. Germany)

DATED: 31/03/2026

Associate Professor IBGE

email: sayyar@aup.edu.pk

Post doc1: Heidelberg, Germany,

postdoc2: CAS Beijing, China

No. RD-01-03/2026

Mr. Sana Ullah has been known to me for the last few years as a student of M.Phil at the Institute of Biotechnology and Genetic Engineering, The University of Agriculture, Peshawar. He has been a very cordial, polite, and energetic young studenty with a lot of potential and enthusiasm for research. He went through intensive and rigorous coursework during his Master's degree program at our institute. He was enrolled in one of my courses (Genetics-I) in his M. Phil degree program, and later on joined my lab to work on an interesting topic 'Artificial intelligence-assisted real-time detection of devastating fruit fly species for their population monitoring and effective control'. During this multidisciplinary project, he closely worked with entomologists for the entomological identification of fruit fly species, which was then cross-validated via molecular methods using species specific primers. He later on in collaboration with experts from artificial intelligence field developed a prototype which could identify different fruit fly species using image processing technologies.

He has a very good academic background which is also reflected in the grades he has obtained in his academics. His technical skills, his commitment, and his desire to peruse higher studies are very impressive. I was impressed by his conceptual clarity, quick learning ability, and sincere academic engagement. His communication skills and enthusiasm for learning make him a promising candidate for both research and academic endeavors. He has a very friendly personality and has no difficulties integrating with people from diverse origins.

Mr. Sana Ullah is a motivated, hardworking, and responsible individual. He is passionate about science and demonstrates the kind of discipline and integrity that is essential for success. I believe he has the intellectual capacity, research experience, and dedication necessary to thrive in a challenging academic environment. With his broad scientific interest, Ms. Sana Ullah can be expected to be a valuable and welcome addition to any high-quality organization. I wish him the best in his future endeavors.

Sincerely,

Dr. Muhammad Sayyar Khan
